ULTRABAG® MDS
PRODUCT PRESENTATION

20L **ULTRABAG®** MDS

590g OF DESERT TECHNOLOGY*

FUNCTIONAL, ERGONOMIC, DURABLE, LIGHTWEIGHT...

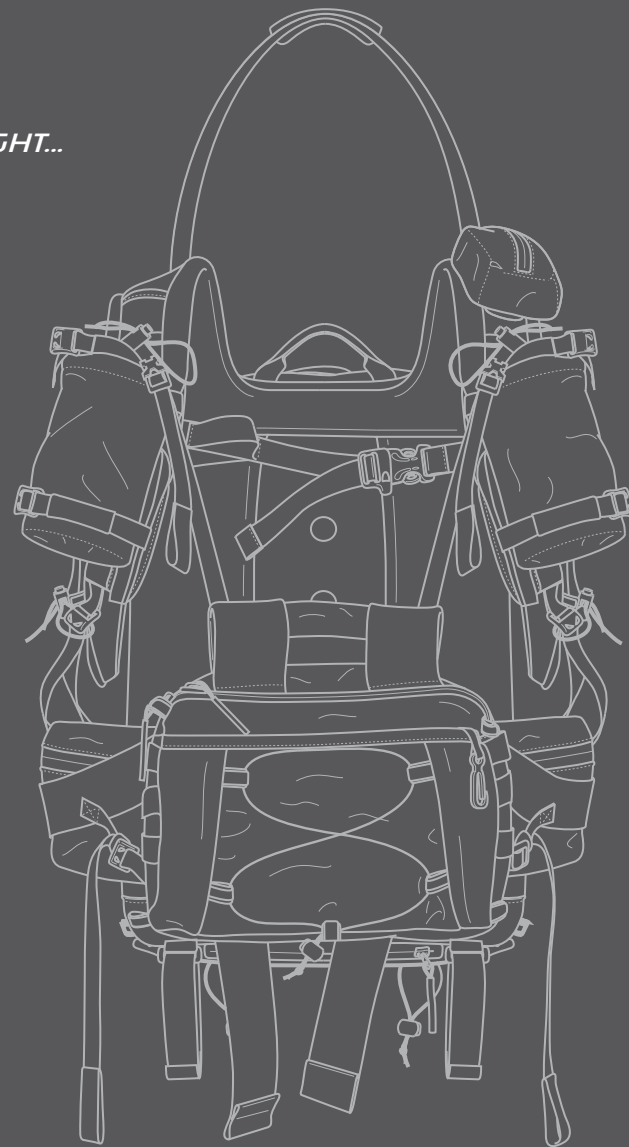

DESIGNED FOR DESERT

The Ultrabag® MDS has been perfectly designed to meet the expectations of the runners of the “Marathon des Sables”, whatever their needs, whatever their body types.

Lightweight, durable and functional, it is 100% customizable and adapts to you.

OPTIONS AND ACCESSORIES INCLUDED

- Detachable and autonomous 4L Front-Pack (185 g)
- Nepalese carrying system (20 g)
- Light-Reflective backpack rain-cover (40 g)
- Light-Reflective front-body-cover (90 g)
- 4 multi-positions water flask-carriers (40 g x4)
- 2 x 750 ml water flasks with drinking pipe (95 g x2)
- Removable side-pocket for mp3 or for waste (25 g)
- Removable inner mesh pocket, for distributing the carried loads (75 g)
- Removable back comfort-foam (45 g)
- 2 independent tropicalized 0.5L front pockets (40 g x2)

Rectangular shape

All rescue units (firefighters, lifeguards, mountain rescue units) have understood that only rectangular format allows easy, fast, and rational storage.

Resistant materials

Ultrabag is the selection of materials meeting highest standards, to compose a product ultra durable.

Straps for rolled floor mat

Or for sleeping bag....
The two straps are removable from the backpack.

Fasteners for “Marathon des Sables” specific race bib

Adapted to the eyelets of the “Marathon des Sables” race bib, the attachment system meets the race’s requirements. And it also prevents damage to your backpack with pins.

Storage for distress flares or rockets, or walking sticks

Initially planned for storing the “Marathon des Sables” distress flare, the storage also fits walking-sticks.

* Weight of bag with no accessory.

FRONT VIEW

Adaptable to all morphologies

The wide ventilated shoulder-straps suit all types of morphologies. Happily tested by runners from 45 kg to 120 kg. The chest-strap moves along rails, to fit every runner.

Detachable and autonomous 4L FrontPack

Integrated to the backpack for a better 'front / rear' load distribution. The frontpack can also be used alone, as an autonomous waist bag, for some long training rides or some trails. The detachable and autonomous FrontPack is light-weight, strong, stable, and functional.

Nepalese carrying system

Your bag feels too heavy after hours of running with 15 kg on the back? Discharge partially or completely your shoulders by using the forehead Nepalese carrying system strap.

SIDE VIEW

Side-pocket for mp3 or for waste

Removable from backpack.

270° opening

A very strong zipper which let you open the backpack 270° and see and access the entire content of your backpack.

Compresses from 20L to 4L

Two compress side-elastic cords adjust the backpack's size, according to what's inside, for a better fit.

Two independent tropicalized 0.5L front pockets

Two removable pockets on the waist strap, offer a possibility of additional storage (0.5L each). They are resistant to rain and moisture.

SIDE VIEW

Removable inner mesh-pocket, for distributing the carried loads

Clipped at the top of the central inner compartment of the backpack, a mesh-pocket allows storage of heavy load, in the upper part of the backpack, to relieve the bottom part.

Water bottles / flasks

2 water bottles of 750ml, with drinking pipe.

Multi-position flask-carrier

With three snaps + two webbings, each flask-carrier remains firmly attached to the shoulder strap, even at fast running pace. The carriers can attach to 4 locations on the backpack, and 2 locations on the frontpack, with height-adjustable.

Washable fabrics

Specially designed for intensive practice of trail! You return home from a muddy training session, put your bag in the wash-machine, it will come out like new.

RAIN-COVER VIEW

Featherweight bag and accessories

Each fabric, each hanging system, each accessory must be as light as possible without sacrificing strength. We selected the most hi-tech components from the market to meet these criteria.

Light-reflective backpack rain-cover

Removable, placed in a pouch under the backback, the rain-cover deploys easily and without the need to stop. It is also light-reflective, a safety necessity for night training sessions.

A hell of a look!

No more 'turtle' looking outfit! Quasimodo is over! Wherever you are, in the race, or on sandy tracks, on mountain trails, or while training, in the subway, or at the office, you will be the fashion victim, leading the way...

Inbuilt light-reflective front-poncho

Removable, placed in a pocket located above the backpack, it takes a gesture and a fraction of second to bring you protection against wind and rain.
